

Features and benefits

Features

Benefits

Maximises the usage of microgeneration/minimizes export

Reduces energy bills (save up to £250!) + still get 50% FIT tariff

Tracks surplus power & diverts this to immersion/other loads

Utilises the free electricity being generated/power storage heater or UFH

Works with PV, wind & hydro microgeneration

One size fits all, greater flexibility, utilises renewable fuels

No need to change immersion heater

Save time and money on the installation

trusine technology (pulse width modulation)

Fast smooth auto power adjustment, 'flicker-free' operation

Clear graphical backlit LCD display

Easy to read, monitor import/export & power to heater. Savings can be displayed in several currencies or in kWh

Manual/programmable 7 day boost timer

Manual & programmable boost function for both heaters

Compatible with third party energy monitors & Smart meters

Future proof, trouble free operation with all inverters

Dual heater capability/Integral multi-function relay

Controls two heaters sequentially/Economy 7 control, de-strat pump, or third heater

Fully short circuit/overload protected

Electronic circuitry, protects the unit against damage/no expensive fuses to change or indeed electrician fees!

Only one wired current sensor req/wireless sensor is available

Can be extended up to 50m/means no cable run required (sensor to unit)

Wireless Ethernet connection will be available in the future

Data logging, monitor savings via designated website (app in the future)

Built in wireless interface (**immerLINK**)

Up to 4 slave **immersUN**[®] units can be connected wirelessly

Made in Great Britain

Keeping UK employees in work/putting money into the UK economy

CE product approval/EN compliance (see technical specifications)

Robust testing, best test results v competitor products

3 year product warranty

Peace of mind, confidence in the product

Maximize the usage of free 'green energy'

Reduces your 'carbon footprint'/environment friendly
